

DESTROYIT[®]

A woman with long dark hair, wearing a dark blazer over a light blue shirt, is looking out a window. She is holding a large, white sheet of paper in front of her, which partially obscures her face. The background shows a blurred view of a city street with warm, golden light, suggesting a sunset or sunrise. The overall mood is contemplative and professional.

Be careful with paper.

Organizations may rely more heavily on digital solutions than ever before, but its dependence on paper is still prominent and will continue to be an everyday component of the business landscape.

Paper isn't going anywhere.

The question is...
What are you doing with it?

Be careful with paper

Information leakage in the trashcan:

What type of firewall does your waste paper bin have?

70% of all important data is still written on paper. And these papers are often simply thrown into the trashcan. Data protection? No idea!

The following documents must be shredded when they are no longer needed:

- Quotations and contractual documentation
- Bank statements and records
- Invoices and receipts
- Personalized advertising documents
- Tax and accounting documents
- Signed documents
- Notes, print-outs, poor copies

THE SOLUTION

Integrate paper shredders into your data protection concept.

In accordance with certain regulations, you must demonstrate that you work compliantly and adhere to the data protection requirements. Protecting the required security level through the use of paper shredders will protect you from paying significant fines, protect your good reputation, and ensure the trust of your customers.

Information leakage: Shredding services.

What happens if data protection is left behind?

Do you have to regularly process large amounts of paper documents? It sounds enticing to have someone else handle both the work and the responsibility. However, this does not bring 100% security.

The risks:

- You do not see the result.
- Your documents are often temporarily stored before they are shredded.
- Shredding services cannot release you from liability in cases of misuse.

THE SOLUTION

Better do the shredding in-house.

No large collecting points, no long transportation routes, no hard-to-monitor intermediate stops: By shredding your confidential documents in-house, these risks are eliminated. High quality and high capacity shredders work for many years – the investment pays off quickly.

Information leakage: Hard drives.

Destroy old digital data, not your good reputation.

Discarded hard drives are an open book for tech-savvy “finders” even if they have been overwritten. Once they have been disposed of, you can no longer verify where your old hard drives actually end up... and what happens to them.

Remember:

Hard drives are not only located in PC's and laptops, but also in printers, MFP's, copiers and servers.

THE SOLUTION

Make your old hard drives unusable.

Regardless if you have to replace an old or defective hard drive, or if you have to return leased equipment: with a hard drive shredder, punch or degausser, you will destroy your discarded electronic data safely, comfortably and reliably.

There are countless ways to improperly do away with obsolete paper documents, and the end result can be catastrophic.

The best way to confidently dispose sensitive information is with a DESTROYIT paper shredder. They are constructed to withstand the rigors of day-to-day office life. Companies, governments and organizations from around the world trust in that.

The cutting shafts

Manufacturing high quality shredders with lifetime cycles have always been a declared aim of DESTROYIT. Our world-class cutting shafts are made from a special hardened steel, and have inspired us with so much confidence that we introduced the Lifetime Guarantee.*

SECURITY LEVELS of DESTROYIT Paper Shredders

Internal data P2

P3 Confidential and sensitive data

Particularly sensitive and confidential data P4

P5 Data that must be kept secret

Secret high security data P6

P7 Top secret

Shown in actual size according to DIN 66399 (standard for the destruction of data).

*High capacity and SMC models have a 1 year limited warranty on cutting shafts.

There's a **DESTROYIT** shredder for every application:

Desktop Shredders

With data protection, it's not the amount of paper waste that is important, but the contents. Even if there is only a small amount of confidential information involved – one single page can be interesting enough for unauthorized third parties. The DESTROYIT desktop shredders guarantee data protection exactly where confidential documents are created: right at your desk.

Centralized Office Shredders

Whenever high performance and a high shred bin volume are required, our centralized office shredders are the first choice. They are suitable for central use and ideal for large work groups, open-plan offices or an entire office floor.

High Capacity Shredders

It does not matter how much paper needs to be shredded: You should always remain in control of your data and never surrender this responsibility to external disposal companies. DESTROYIT provides optimum solutions for in-house bulk shredding, too.

Special solutions

A single hard drive from a PC, laptop, or MFP can store astounding amounts of information and could have catastrophic consequences for your organization should it fall into the wrong hands. MBM has special solutions for protection against the abuse of electronically stored data.
